Celeriac

Prestinun, the perfect start to your culture

Prestinun is a pill for celeriac. Celeriac is a naturally slow germinator and has a very small seed. BASF's vegetable seeds business has substantially improved sow ability and germination speed by creating a special pill and developing a unique priming process.

The benefits of Prestinun are:

- Reliable, very high percentage rate of germination
- Uniform germination
- Pills germinate within a shorter period
- This reduces heating and space costs
- A special type of packaging has greatly improved the pills' shelf life

Advantages for businesses growing young plants:

- Uniform young plants
- Reliable and efficient method of seedling production
- Pills have long shelf life

Advantages for growers:

- Uniform young plants
- More efficient and faster planting
- High and constant yield per ha

Comments

To preserve their quality, the pills must be stored in sealed packaging at a constant 4 °C. Prestinun is available for all Nunhems celeriac varieties.

Celeriac Varieties

PRINCINO F1

Earliness

- Ideal, highly bolt-resistant variety for the earliest possible start to the season
- You will be the first on the market with Princino

PRINZ

Quality and yield

- Highly bolt-resistant variety
- All-round variety for all cultivation segments
- The celeriac variety with the longest harvest window

CODEX F1

Very smooth skin

- The tubers are rounded, with a smooth surface, and compact root implant
- This makes them quicker and easier to prepare
- This makes an attractive product for fresh market
- Thanks to its vigor and shape, growing at higher density is possible

REX F1

Productivity

- Very high yield, making it ideal for the industry and processing
- High profitability due to low production costs
- Compact root implant, this makes them easy to clean

MONARCH

Traditional

- Variety who exist already many years
- Can be used for processing

MARKIZ F1

Yield and inner quality

- Excellent inner quality
- Perfect white color after cutting
- 1 kg bulbs no cavity
- Very high-yielding variety, ideal for planting from May 5th onwards
- Good foliage health
- Frost-protective leaves can also be harvested late

DUKIZ F1

The new hybrid for long-term storage

- Stable growth
- Healthy leaves
- Very good storability
- Strong nose, gives a bulb who has good shelf live after washing
