BITTER GOURD

US 1315

- Strong and sturdy vines
- Dark green, attractive, glossy & uniform fruits
- Early maturity with high yield
- Prolific bearing with easy marketability
- Good shipping and keeping quality
- Average fruit length: 8-10 cms

NEW

RUSHAAN

- Attractive, dark green and uniform fruits
- Intermediate resistance for Leaf Curl Virus & Powdery Mildew
- High yield
- Good for shipping

AMANSHRI

- Early maturity
- Heavy yield with prolific bearing
- Attractive, shining and dark green fruits
- Suitable for long distance shipping with good keeping quality
- Average fruit length: 22-24 cms

US 33

- Strong, sturdy vines having vigorous growth
- Attractive, glossy, white colour uniform fruits
- Fruits having broad tubercles (less breakable) with good shipping & keeping quality
- Prolific bearing with high yield
- Average fruit length: 18-20 cms

US 6214

- Excellent vine vigour with good crop longevity
- Dark green, glossy & attractive medium long size fruits
- Suitable for long distance shipping
- Average fruit length: 16-20 cms

US 475

- Strong, sturdy vines having vigorous growth
- Attractive, dark green, uniform fruits
- Prolific bearing with high yield
- Good crop longevity
- Average fruit length: 24-28 cms

RACER

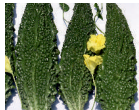

- Highly adaptable and high yield
- Uniform dark green fruits
- Better shelf life and suitable for long distance shipping
- Average fruit length: 9-11 cms

US 1321

- Healthy and vigorous vine
- Early maturity with high yield
- Smooth, dark green, glossy, attractive medium size fruits
- Good shipping & keeping quality
- Average fruit length: 12-14 cms

ROCKER

- Prolific bearer with easy to market fruits
- Attractive, glossy, dark green coloured medium size fruits
- Good shipping & keeping quality
- Average fruit length: 14-15 cms

RIDER

- Dark green, glossy and attractive fruits with blunt spines
- Suitable for long distance shipping with good keeping quality
- Average fruit length: 28-30 cms

BOTTLE AND RIDGE GOURD

ANOKHI

- Strong, vigorous vine with more branches
- Early maturity, continuous and prolific bearing
- Straight, cylindrical and attractive green fruits
- Suitable for long distance shipping with good keeping quality
- Average fruit length: 30-35 cms

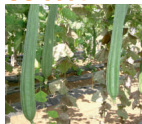

NEW

AROOSA

- Earliness & high yield
- Excellent fruit uniformity
- Attractive, cylindrical green fruits
- Good colour retention in subsequent pickings
- Less foliar diseases
- Good crop longevity
- Fruit length around 35 cms

US 6001

- Vigorous vine with prolific bearing
- Early maturity with high yield
- Slender, straight, dark green attractive fruits
- Average fruit length: 45-50 cms

CABBAGE

IMPROVED BAHAR

- Waxy, bluish green leaves
- 65-70 days maturity from transplanting
- Round, compact head of 1.0-1.5 kgs
- Intermediate resistance to Black Rot & DBM
- Field holding capacity of 15-20 days after maturity

PRAGATI PLUS

- Greenish, waxy leaves, small to medium plant frame
- 60-65 days maturity from transplanting
- Round, compact head of 1-1.2 kgs
- Field holding capacity of 10-15 days after maturity

YASH

- Medium large plant frame of bluish-green colour leaves
- 65-70 days maturity from transplanting
- Round to high round heads of 1.0 -1.2 kgs average weight
- Field holding capacity of 15-20 days after maturity

CARROT

BASF

BASF
We create chemistry

nunhems

ALAMADA

- Orange nantes type carrot
- Maturity in 110-120 days
- 15-20 days of good field holding capacity
- Intermediate disease resistance to alternaria
- Suitable for round the year cultivation
- Good cold storage capacity

BRILLYANCE

NEW

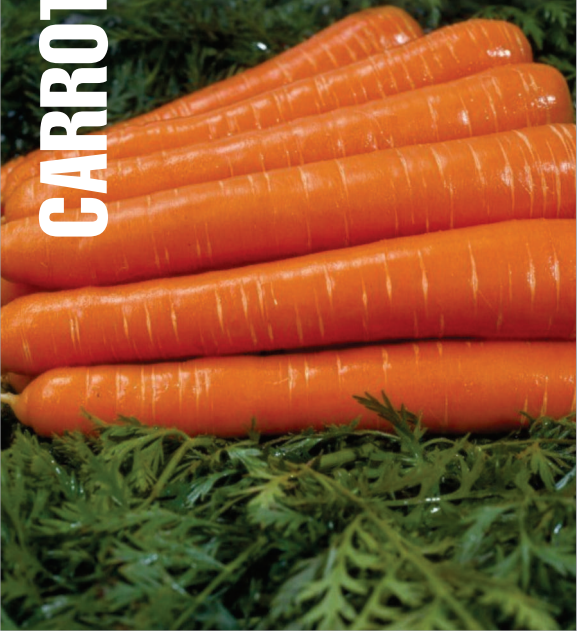

- Orange nantes type carrot
- Maturity in 125-130 days after sowing
- Glossy & smooth surface in roots
- Resistance to powdery & alternaria disease
- 10-15 days of good field holding capacity
- Suitable for round the year cultivation

ROMANCE

- Orange nantes type carrot
- Maturity in 110-130 days
- Attractive root colour & good root uniformity
- 15-20 days of good field holding capacity
- Best sowing season: Dec-Feb
- Good cold storage capacity

NEW

SIRKANA

- Orange nantes type carrot
- Maturity in 105-110 days after sowing
- Bulky carrots with high yield
- Attractive orange colour & root uniformity
- 10-15 days of good field holding capacity
- Suitable for Nov-March cultivation

CUCUMBER

BELLÉ

NEW

- Good vigour with strong plants
- Attractive, medium green slender fruits
- Good shelf life
- Tasty crispy flesh
- Intermediate resistance to ToLcNdV (Tomato Leaf Curl New Delhi Virus)
- Better yield

DON

- Healthy, good vigour crop with longevity
- Better quality fruits • Attractive green colour
- Cylindrical and straight fruits
- Good shelf life • Ability to bear more fruits
- Good internal quality
- Higher % of marketable fruits • High yield
- Intermediate resistance to Downy Mildew

US 447

- Medium green elliptical fruits
- Fruit length: 16-20 cms long
- Vigorous plants
- Early harvesting in 42-45 days
- Profuse bearing

IMPROVED NOORI

- Crispy, uniform & straight fruits
- Excellent shelf life
- Suitable for long distance shipping
- Early harvest hybrid
- Fruit length x thickness: 18.5 x 4.5 cms

US 800

- Cylindrical white fruits with greenish streaks
- Crispy flesh
- Fruit Length: 14-16 cms

US 6125

- Light green elliptical fruits
- Strong and sturdy vines
- Early picking in 42-45 days
- Fruit length: 18-20 cms
- No shrinkage in fruit length

US 556

- Good plant vigour
- Better tolerance to heat & moderate tolerance to virus
- Attractive, elliptical green fruits of around 18-20 cms length
- Good internal with small to medium size seeds with good crispiness

US 640

- Elliptical, medium green fruits
- Early picking in 40-42 days
- Fruit length: 16-18 cms long
- Profuse bearing

INFINITY & KIAN

- Parthenocarpic beta alpha type hybrid
- Cylindrical, glossy and medium green colour fruits
- Semi-multi fruited on main stem
- Bears 2-3 fruits per node
- Intermediate resistance to powdery and downy mildew

NEW

SEEGREEN

- Open type plants • Optimum vigour
- Dark green small leaves
- Healthy plants
- Cluster bearing habit with 3-4 fruits per node
- Good regeneration capacity with good endurance
- Attractive, dark green, glossy fruits

HOT PEPPER

BASF

nunhems

ARMOUR

- Semi-erect and strong plant structure
- Suitable for fresh & dry purpose
- Suitable for red dry processing with around 75000 SHU & 75-80 ASTA
- Intermediate resistance to ChiLCV
- Semi-wrinkled fruit surface
- Fresh fruiting starts from 45-50 days in Kharif season
- Fresh green picking interval: 8-10 days
- Length x Thickness: 9-10 x 1 cm

US 341

- Semi-erect vigorous plants
- Dual purpose hybrid
- Good dry colour and colour retention
- High colour content - upto 125 ASTA
- Length x Thickness: 13 x 1.2 cms

DEVANUR DELUXE

- Traditional byadgi type fruits
- Early picking with good rejuvenation capacity
- High colour value of 180 ASTA
- Good colour retention
- High market preference for powder & oleoresin industries
- Cayenne type with semi-wrinkled skin and medium pungency
- Length x Thickness: 13-15 x 1.3 cms

US 730

- Semi-spreading plant habit
- Suitable for pickle (Achari) purpose
- Light green mild pungent fruits
- Early picking - within 55 days
- Length x Thickness: 15-17 x 2.5 cms

US 1081

- Dual purpose hybrid
- Light green fresh fruits with low to medium pungency
- Wrinkled fruit (Byadgi) with deep red dry colour
- Good colour retention
- Length x Thickness: 15 x 1.3 cms

ARJITH

NEW

- Intermediate resistance to Chilli Leaf Curl Virus (ChLCV)
- More red yield
- Less labour costs, more savings
- Short internodal distance means more fruits, more yield

INDU

- Vigorous plants with excellent secondary branching
- Good colour retention
- Firm glossy fruits with good pungency and shipping ability
- Suitable for fresh & dry purpose
- Length x Thickness: 8-10 x 0.8-1.0 cms

LASER

- Erect and sturdy plant
- Good fruit colour and high pungency
- Good fruit setting
- High yield
- Better colour retention
- Length x Thickness: 8-10 x 0.8 -1.0 cms

US 1003

- Semi-erect with good branching
- Good heat set
- Light green & semi-wrinkled fruits
- Early harvesting
- Short interval between pickings
- Length x Thickness: 15 x 1.3 cms

US 702

- Suitable for both fresh & dry purpose
- Green fruits with medium pungency
- Deep red dry fruits
- High yielding variety
- Length x Thickness: 15 x 1.4-1.8 cms

US 720

- Suitable for both fresh & dry purpose
- Green fruits with medium pungency
- Deep red dry fruits
- High yielding variety
- Length x Thickness: 15 x 1.4-1.8 cms

OJAS

- Healthy, straight and strong plants
- Good crop longevity
- Good general disease tolerance
- Flattish round, green colour fruits
- The first choice of traders - green and red fruits
- Length x Thickness: 17-18 x 2-2.2 cms

US 917

- Semi-erect vigorous plants
- Attractive green colour fruits
- Good heat tolerance
- Fruits with good firmness & medium pungency
- Length x Thickness: 13 x 1.2 cms

LAALI

- High yield
- High colour value upto 180 ASTA and less pungent (<25000 SHU)
- High market preference for powder and oleoresin industry
- Suitable for exports
- Length x Thickness: 16.5 x 1.4 cms

INDIRA PLUS 1

- Strong plant architecture
- Attractive, smooth, medium pungent and green to dark green coloured fruits
- Firm fruits with good keeping quality and transportability
- Suitable for fresh green purpose
- Good test weight and high yield hybrid
- Length x Thickness: 11-12 x 1.2-1.3 cms

INDIRA

- Strong and compact plant architecture
- Green fruits with medium pungency
- Smooth and firm fruits
- High fruit setting
- Good heat set
- Intermediate resistance to CMV
- Length x Thickness: 12 x 1.3 cms

PRIYANKA

- Strong and erect plant architecture
- Suitable for both fresh and dry purpose
- Good colour value of upto 140 ASTA
- High market preference
- Cayenne type with smooth skin and high pungency
- Length x Thickness: 12-13 x 1.2-1.4 cms

NANDITA

- Sturdy, erect plant structure
- Appropriate for fresh use
- Attractive, shiny and long-lasting fruits
- Good rejuvenation (revival)
- Preferred by most exporters
- Length x Thickness: 12-13 x 1.2 cms

SOLDIER

- Early maturity
- Firm fruits with good shipping quality
- Suitable for both fresh/dry purpose
- Cayenne type with smooth skin and medium pungency
- Good heat set
- Length x Thickness : 10-11 x 1-1.2 cms

UJALA

- Traditional pusa jwala type fruits
- Attractive, firm and shining light green fruits
- Good shipping and keeping quality
- High consumer & market preference
- Cayenne type with wrinkled skin and high pungency
- Length x Thickness: 12-13 x 1-1.2 cms

US 344

- Semi-erect vigorous plants
- Green coloured shiny fruits
- Suitable for long distance transportation
- High yielding hybrid
- Length x Thickness: 13-14 x 1.3 cms

DEEPTI

- Vigorous & strong plants
- High yield
- Smooth & medium pungent fruits
- Good for red wet & dry fruits
- Length x Thickness: 14-15 x 1.5-1.7 cms

KRANTI

- Strong and erect plant architecture
- Shining and attractive green fruits
- Good shelf life
- Excellent heat set
- Cayenne type with smooth skin and low pungency
- Length x Thickness: 14-16 x 1.5-1.8 cms

MEENAL

- Vigorous & strong plants
- High yield
- Smooth & medium pungent fruits
- Good red coloured fruits with colour retention
- Length x Thickness: 15-16 x 1.3-1.6 cms

VEERJI

- Traditional CH -1 type fruits
- Early as well as prolonged harvest
- Heavy and continuous bearing
- Uniform fruit shape & size
- Good heat set
- Cayenne type with high pungency (upto90000 SHU)
- Length x Thickness: 7-8 x 0.9 - 1.2 cms

PREETI

- Strong and erect plant architecture
- Suitable for both fresh and dry purpose
- Attractive, firm fruits with high market preference
- Good colour value of upto 140 ASTA
- Cayenne type with semi-wrinkled skin and medium pungency
- Length x Thickness: 14-15 x 1.2-1.3 cms

NANDI

- Strong & erect plant architecture
- Attractive, shining fruits with more test weight
- Firm fruits, suitable for long distance shipping
- Cayenne type with medium pungency
- Length x Thickness: 12-14 x 1.3-1.5 cms

US 1003

- Semi-erect with good branching
- Good heat set
- Light green & semi-wrinkled fruits
- Early harvesting
- Short interval between pickings
- Length x Thickness: 15 x 1.3 cms

US 611

- Suitable for fresh green purpose
- Light green fruits with medium pungency
- Good fruit shelf life & transportability
- High yielding hybrid
- Length x Thickness: 14 x 1.2 cms

US 612

- Semi-erect plant type
- Light green fruits turn to attractive deep red colour fruits
- Dual purpose hybrid
- Shiny, fresh light green colour fruits
- Medium pungent
- Length x Thickness: 15 x 1.5 cms

US 675

- Good semi-spreading plant architecture
- Suitable for dual purpose
- Green to light green fruits with good red dry colour
- Glossy, fresh fruits with medium pungency
- Length x Thickness: 16 x 1.4 cms

US 765

- Semi-spreading plant habit
- Green fruits with medium pungency
- Dual purpose hybrid
- Deep red dry colour
- Length x Thickness: 14 x 1.7 cms

US 918

- Erect plant structure
- Suitable for fresh green fruits
- Light green colour fruits with glossy shine
- Firm fruits with medium pungency
- Length x Thickness: 14 x 1.4 cms

US 323

- Vigorous plants with semi-erect architecture
- Light green fruits with good shine
- Medium pungent fruits
- Suitable for long distance shipping
- Intermediate resistance to Phytophthora Wilt
- Length x Thickness: 14 x 1.3 cms

US 803

- Suitable for fresh green fruits
- Early hybrid with harvest at 55 days
- Firm and shiny fruits
- High pungency
- Good keeping quality & high yield
- Length x Thickness: 10 x 1 cm

SINGHAM

- Tall vigorous hybrid
- High yield
- Long pentagonal fruits with attractive dark green colour
- Great vigour
- Better crop longevity

SHIVANSH

- Dwarf hybrid with short internodes
- Attractive, glossy, dark green, long pentagonal fruits
- Wide adaptability
- Good longevity
- More no. of pickings and less spines

SAMRAT

- Medium tall hybrid
- Excellent fruit quality with attractive dark green thick pentagonal shape
- Good fruit length: 14-16 cms
- High yield
- Suitable for all okra growing areas

SELVAM

- Medium tall hybrid
- Shiny fruits
- Wide adaptability
- Good longevity
- More no. of pickings and less spines
- Smooth picking

SARVOTTAM

- Medium tall hybrid
- Smooth picking and good fruit quality
- Medium early
- Medium vigour with serrated leaves
- Good fruit weight and early yield
- Attractive, dark green, long pentagonal fruits
- Wide adaptability and good branching
- Medium tall plant height

SIRMOUR

- Medium tall hybrid
- Smooth picking and good fruit quality
- Medium early
- Good fruit weight and early yield
- Medium vigour with serrated leaves
- Attractive, dark green, long pentagonal fruits
- Wide adaptability and good branching

SHAKTI

- Tall vigorous hybrid
- Pentagonal, medium thick, dark green and glossy fruits of 12-14 cms length
- Good crop longevity
- High yield
- Vigorous plants with short inter-nodes and good branching

SHIKHAR

- Medium tall hybrid
- Attractive, dark green, thin to medium, thick pentagonal, long fruits
- Medium to good branching
- Fruit length: 14-16 cms
- Suitable for all okra growing areas

SARTAJ

- Medium tall hybrid
- Attractive, dark green, thick & pentagonal long fruits
- Fruit length: 14-15 cms
- Good average fruit weight
- Medium to good branching
- Tall vigorous plants
- Better crop longevity

SONAKSHI

- Medium tall hybrid
- Early picking
- Plants with thin leaves and good branches
- Medium height plants
- Long, pentagonal fruits with attractive dark green colour
- Good for export purpose

US 7109

- Medium tall hybrid
- High yield
- Dark green, long and slender fruits with five ridges
- Short internodes
- Cultivated round the year

NEW

SPOORTHY

- Good vigour with serrated leaves
- Medium Dwarf plants
- Good branching
- Shiny green, thin long fruits with medium tapering tip
- Good crop longevity and excellent yield
- Good resistance to YVMV and moderate resistance to ELCV

ONION

MATAHARI

- Dark red colour
- Globe shape
- 40-70 mm (80-175 gms)
- High yield
- Single centre
- Medium fragrance
- Earliness

SANTIRE

- Uniform shape
- Uniform size
- Very attractive colour

PICKLING CUCUMBER

AJAX

- Widely adapted hybrid
- Early high yield
- Suitable for all grades

EQ SPEED

- Parthenocarpic variety
- Early harvesting with early peak yield
- High fertility with follow up bearing
- High % of premium grade fruits (160+)
- Better fruit quality, shape and uniformity
- High yield with good regeneration
- Suitable for open & polyhouse condition

SECURE

- Parthenocarpic hybrid with good vigour
- Dark green leaves with short internodes
- Cylindrical fruits with good processing quality
- Intermediate resistance to certain viruses
- High yield with good crop longevity
- Suitable for open & polyhouse condition

PICKLING CUCUMBER

SPARTA

- Better resistance to most of the diseases
- Covers most of fruit grades
- Good heat set (performs in higher temperatures)

ANAXO

- Parthenocarpic with high yield
- Cylindrical fruits suitable for all grades
- Performs well under stress conditions
- Faster regeneration

VERTINA

- High quality fruits suitable for processing
- Parthenocarpic with high yield potential
- Suitable for both open and polyhouse condition

ENSURE

NEW

- Parthenocarpic hybrid with optimum vigour
- Intermediate resistance to certain viruses
- Good bearing habit with follow-up fruits
- Dark green, bitter-free fruits
- Fruits suitable for all grades with LD ratio 3.2:3.3
- High yielding nature with good endurance

SWEET PEPPER

TARQUINIO

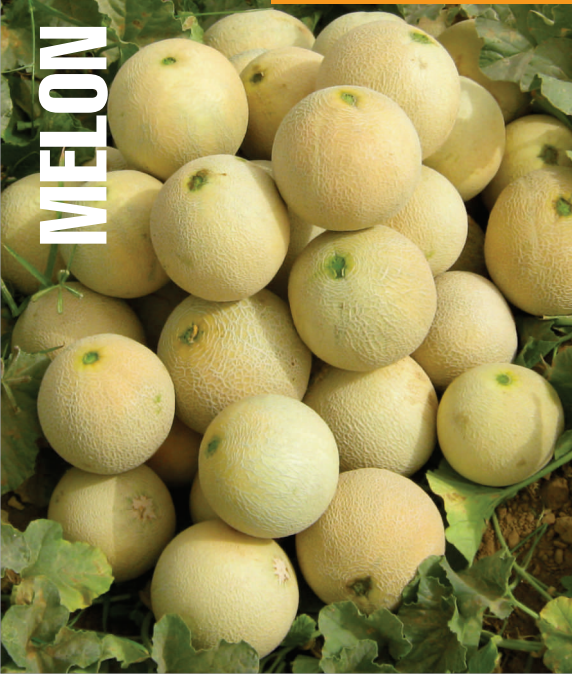

- Erect plant habit
- First harvesting in 65-70 days
- Dark green, firm fruits
- Average fruit length: 9-11 cms & diameter: 7-8 cms
- High yield
- Suitable for outdoor cultivation
- Fruits shelf life: 7-8 days

US 1147

- Semi-erect plant habit
- Early picking: 55-60 days after transplanting
- Green to dark green blocky shape fruits
- Shiny & firm fruits, good for transportation
- Fruit weight: 145-150 gms

MELON

LYALLPUR 257

- Cantaloupe
- Attractive, orange flesh with aroma
- High brix: 12-16%
- Medium to small cavity
- Colour turning after maturity
- Uniform netting
- Average weight of 1kg
- Uniform fruits
- Good yield

MADHURAJA

- Madhuras type fruits
- Maturity in 55-60 days (5-7 days earlier than Madhuras)
- 1.0-1.25 kgs weight
- Good flesh colour and aroma
- Mild netted with medium cavity
- 12-15 % TSS
- Excellent bearing

TOMATO

US 440

- Plant habit: semi-determinate
- Flat round, uniform green colour to deep red at maturity
- Average fruit weight: 90-100 gms with good firmness
- Good keeping quality
- Intermediate resistance to ToLCV
- Good adaptability

SAMPURNA

- Semi-determinate plants with vigorous growth and high fruit setting
- Maturity in 60-65 days from transplanting
- Flat round shape with good firmness
- 80-100 gms uniform size fruits with deep red colour at maturity
- Intermediate ToLCV resistance
- Good crop longevity

ARYA

NEW

- Plant habit: semi-determinate
- Maturity in 65-68 days from transplanting
- Flat round shape with 80-90 gms fruit size
- Good heat set & intermediate ToLCV resistance
- High yield & uniform fruit size over picking
- Good firmness & transportability

US 2853

- Plant habit: indeterminate type
- Round, uniform green colour fruits turn to deep red in colour at maturity
- Average fruit weight: 90-100 gms with good firmness
- Good keeping quality
- Good transportability
- Intermediate resistance to heat and ToLCV
- Suitable hybrid for Northern India & hilly markets

LAKSHMI

- Large determinate plants
- Maturity in 55-60 days after transplanting
- Flat round firm fruits of 80- 90 gms with sour taste
- Good adaptability and heat set
- Intermediate ToLCV resistance

US 800

- Plant habit: semi-determinate
- Flat round fruits with deep red colour
- Average fruit weight: 90-100 gms with good firmness
- Good keeping quality
- Intermediate resistance to ToLCV & Early Blight
- Suitable for round the year cultivation

US 920

- Plant habit: indeterminate
- Oval shape fruits with uniform, deep red colour
- Average fruit weight: 100 gms with good firmness
- Cluster bearing: 6 to 7 fruits
- High yield
- Intermediate resistance to Bacterial Wilt

AVTAR

- Indeterminate plants
- Maturity in 65-70 days after transplanting
- Deep oblate fruits of 80-90 gms
- Uniform size fruits with 5-6 fruits per cluster
- Firm fruits, suitable for long distance shipping
- Intermediate resistance to bacterial wilt

RAKSHAK

- Semi-determinate and vigorous plants
- Maturity in 65-70 days after transplanting
- Deep oblate fruits with 80-90 gms size
- Firm and uniform size fruits
- High yield and good crop longevity
- Resistance to ToLCV

US 1143

- Plant habit: determinate type
- Square round fruit shape
- Uniform size fruits with deep red colour at maturity
- Average fruit weight: 90-100 gms with good firmness
- Good keeping quality
- High yield
- Intermediate resistance to ToLCV

nunhems

MAXX

- Mini-seeded oval fruits
- Good shipping and keeping quality
- High fruit size uniformity
- Deep red crispy flesh • High yield
- 11-13% brix • 4-5 kgs fruit size
- High adaptability across India
- Strong and vigorous plants

REHAAN

NEW

- Oval shaped & uniform size fruits
- Unique exterior with attractive rind pattern
- Deep red flesh with sweet flavour
- High yield
- Adaptable across geographies

AASTHA

- High yield
- Extremely attractive jubilee elliptical (oval-shaped) fruits
- Sturdy, healthy and dense plants
- 8-10 kgs weight • Ripens in 80 days
- Deep red flesh of good built
- Small dark brown seeds
- Tolerant to inorganic (abiotic) stress
- Sweetness: 12% TSS

PAKEEZA

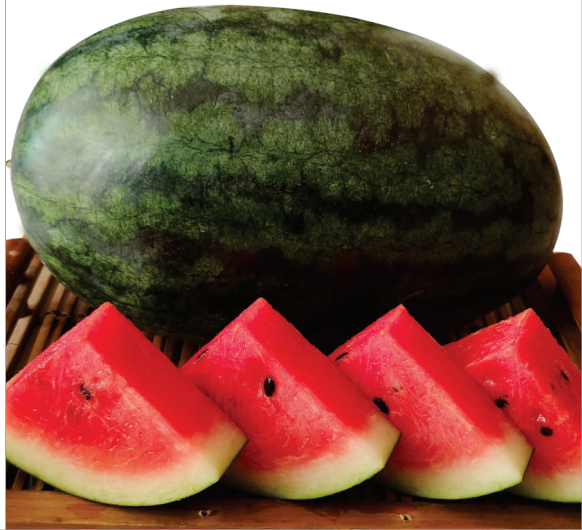

- Jubilee, elongated oval fruits
- Maturity in 70-75 days
- Deep red, granular flesh texture
- 8-10 kgs uniform weight
- Healthy plants
- Sweetness (12% TSS)
- High yield

AYESHA

- Sugar baby round
- Vigorous plants and prolific bearing
- Maturity in 75-80 days
- Deep red, granular flesh texture
- 5-7 kgs weight
- High sweetness (11-12%)
- Performs well under stressful conditions
